Type 100
Precision Air Pressure Regulator
Accurate, stable and dependable pressure regulation

The Type 100 is a high precision, multi-stage pressure regulator. This pressure controller provides the highest level of regulation accuracy and repeatability available. The Type 100 is ideal for applications that call for the utmost in control and maximum stability under variable operating conditions. A stainless steel measuring capsule is used as a sensing element to activate the high gain servo balanced control mechanism in which the main valve is controlled by a pilot valve. This allows for greater accuracy and eliminates many of the problems associated with conventional regulators using range springs and diaphragms.

Features

• **Accurate Pressure Regulation**
  Controls output pressure to within 0.1% accuracy. Regulated pressure variation as small as 0.01 psig is self corrected

• **Stable Output**
  Substantial changes in flow have virtually no effect on regulated pressure from dead end to 12 SCFM.

• **Dependable Startup**
  Returns the regulated pressure to its original output setting even after long “down time”

• **High Relief Capacity**
  An optional high flow relief valve provides quick response when regulated pressure is reset to a lower value or when there is a large amount of system back pressure to be relieved

• **Temperature Stability**
  A stainless steel measuring capsule which activates the servo-control mechanism minimizes effects on regulated pressure by wide variations in operating temperature.

• **Locking Capability**
  Locking nut prevents inadvertent pressure adjustment
Type 100 Precision Air Pressure Regulator

Applications
The Type 100 is well suited for processes that require precise regulation of air pressure in pipes and vessels. The Type 100 is often used, but not limited to the following applications:
- Diagnostic Controls
- Medical Instrumentation
- Precision Fluid Control
- Ventilators
- Microfluidics
- Gate Actuators
- Air Gauging
- Roll Loading
- Gas Mixing
- Valve Operators
- Calibration Standards
- Cylinder Loading
- Air Hoists
- Web Tensioning

Specifications
- Flow Capacity: 14 scfm (420 NL/min) at 100 psig (6.8 BAR) supply–20 psig (1.4 BAR) outlet
- Exhaust Capacity: 5 psig (0.4 BAR) above 20 psig (1.4 BAR) set point
- Type 100: 3 scfm (85 NL/min)
- Type 100HR (High Relief): 11 scfm (311 NL/min)
- Type-100EHR (Extra High Relief): 13 scfm (425 NL/min)
- Sensitivity: 1/8” (3.2 mm) water
- Pilot Pressure Chamber Bleed Rate: less than 0.08 scfm (2.4 NL/min)
- Total Air Consumption: 6 scfh (3 NL/min)
- Effect of Supply Pressure Variation of 25 psig (1.7 BAR) on outlet: less than .005 psig (0.003 BAR)
- Supply Pressure, Maximum: 150 psig (10.5 BAR); Type-100LR 50 psig (3.4 BAR)
- Operating Temperature: -20° to 160°F (-29° to 71°C)
- Materials:
  - Body: diecast zinc alloy
  - Capsule and adjusting screw: stainless steel
  - Assemblies: stainless steel, brass, plated steel, acetal
  - Diaphragms: Buna-N elastomer and polyester fabric
  - Knob: phenolic plastic
- Weight: 1.4 lb (635 g)
- Port Sizes: 1/8”, 1/4”, 3/8” NPT/BSP
- Gauge Ports (2): 1/4” NPT/BSP
- Output Pressure Ranges:
  - 0.5-25 psig (0.03 - 1.7 BAR) Type-100 only
  - 2-40 psig (0.14-2.7 BAR) 2-60 psig (0.14-4 BAR) 2-120 psig (0.14-8 BAR)
- Mounting Options: pipe, panel or optional bracket

Flow Characteristics

Models
- Type 100 Standard
  - Standard version relief—offered in three pressure ranges (2-40 psi, 2-60 psi, 2-120 psi) and three port sizes (1/8”, 1/4”, 3/8”).
- Type 100HR High Relief
  - High relief capacity allows for quick “blow-down” capability for rapid exhaust of output pressure. Ideal for pneumatic counterbalance applications.
- Type 100EHR Extra High Relief
  - Extra high relief allows quick "blow-down" for up to 15 scfm (450 NL/min) exhaust capacity.
- Type 100LR Low Range
  - Low range capability provides accurate pressure regulation at lower output range. Operates with an output pressure range of 0.5 psig to 25 psig. Maximum supply pressure is 50 psig.
- Type 100PL Plunger
  - Linear actuation of a plunger controls regulated pressure of a knob.
- Type 100BP Bottom Port
  - Bottom ported supply and output pressure, as well as four tapped mounting holes for manifold mounting. Suitable for applications with limited space.
- Type 100M Motorized
  - Motorized regulator. Regulation accuracy and sensitivity of the Type 100. Suitable for remote, "fail in place" applications. See website for more information.

Applications
- Diagnostic Controls
- Medical Instrumentation
- Precision Fluid Control
- Ventilators
- Microfluidics
- Gate Actuators
- Air Gauging
- Roll Loading
- Gas Mixing
- Valve Operators
- Calibration Standards
- Cylinder Loading
- Air Hoists
- Web Tensioning
Accurate, stable and dependable pressure regulation

Plunger operation or manual knob adjustment

Compact size

Dependable start-up

Locking capability

Low range model with output pressure below 2.0 psig

High and Extra High relief models for fast exhaust of downstream pressure

Optional bottom porting for manifold mounting

### Principles of Operation

The measuring capsule in the Type 100 is the sensing element that controls a high precision, balanced servomechanism. Stainless steel alloy construction gives the measuring capsule the ability to maintain forces over long periods of time without hysteresis. This eliminates problems associated with regulators that are controlled by a range spring. The downstream regulated pressure fills the control chamber and surrounds the measuring capsule. Expansion, contraction, or other slight movement of the capsule causes the pilot valve to open or close. This creates a substantial pressure change within the pilot pressure chamber. The change in pilot pressure is directly proportional to the downward force on the pilot diaphragm which causes the appropriate movement of the supply valve or relief valve and corrects any variation from set pressure. The high gain nature of this servomechanism allows the Type 100 to react to changes in set pressure as little as 0.01 psig.

Regulated pressure applies an upward force on the underside of the control diaphragm. When set pressure drifts above the set point the control diaphragm assembly moves upward and allows excess pressure to be vented out of the relief valve to atmosphere. The design of the relief valve permits substantial reverse flow capacity which quickly exhausts system back pressure thus eliminating the need for a separate relief valve.

### Options

- **Tamperproof Cover** - Add “T” at end of part number (See drawing for dimensions)
- **Preset Pressure** - Output pressure can be preset at factory. (Consult factory for ordering information)
- **Tapped Exhaust** - To order with a 10-32 tapped exhaust vent and barred bleed screw, add an “E” to end of part number
- **Oxygen Compatible** - Consult factory for ordering information
- **BSP Porting** - To order with BSP porting, add “U” to end of part number

### Accessories

**Mounting Bracket:** P/N 446-707-045

**Gauges:**
- 1/4" NPT back-mount, 2" face, dual scale
  - 0-15 psi P/N 446-725-003
  - 0-30psi P/N 446-725-004
  - 0-60 psi P/N 446-725-001
  - 0-160 psi P/N 446-725-002
