Stainless Steel Regulators and Filters

Type 350SS Stainless Steel Filter Regulator | Type 360SS Stainless Steel Regulator
Type 370SS Stainless Steel Filter

The Type 350/360/370SS series of stainless steel regulators, filter regulators and filters are designed to stand up to the harshest environments while providing highly accurate pressure regulation. Proven 316L stainless steel housing and 316 stainless steel filter assemblies along with fluorocarbon elastomers make the 350/360/370SS compatible with sour gas and adaptable to off shore environments. These quality instruments are economical to buy as well as operate, and provide extremely stable and repeatable control of gas pressure. Oversized valving helps the units achieve high flow rates with minimal pressure drop.

Type 350 Filter Regulator and Type 370 Filter with Automatic Drain

Condensate waste liquid is automatically expelled from the bowl when the liquid reaches a specific level. The low maintenance Automatic Drain helps prolong the life of the regulator and filter by preventing corrosion on the bottom of regulator and reducing the load of the filter.

Type 360 Regulator

Designed to provide accurate, constant control under variable flow rates and supply pressures. Compact and lightweight housing allows this unit to be mounted in applications where space is limited. Its durable construction withstands long term
